```
The present invention describes composition of matter (I) comprising an CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is: C (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each (CC (A1)a-F1-(X2)b, where (I) c-P1. (L2)d-P2. (L3)d-P2. (L3)d-P2. (L3)d-P2. (L3)d-P2. (L3)d-P3. (L3)d-P3. (L3)d-P2. A compound which binds to an mpl receptor comprising a thrombopoietin commette peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], commette peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], commette peptide (TMP_2 are amino acid sequences varying from at least comprising x_2-x_1_0, x_2-x_1_1, x_2-x_1_2, x_1-x_1_2, x_1-x
                                                                         Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; manunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMF; inhibitor; erythropoletin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified peptide; therapeutic agent; fusion; Fc domain; cancer;

The present invention describes composition of matter (I) comprising an (XI)a-F1-(XI)b, where: FI = an Fc domain, XI and X2 = are each (XI)a-F1-(X2)b, where: FI = an Fc domain, XI and X2 = are each independently selected from -(LI)c-P1-(LI)c-P1-(LI)d-P2.

(LI)c-P1-(LZ)d-P2-(L3)e-P-3, or -(L1)c-P1-(LZ)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2. P3, and P4 = are each independently sequences of harmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently independently linkers; and a, b, c, d, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently law eytostatic, antiasthmatic, thrombolytic and immunosuppressive cc have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are consenting cancer, asthma, thrombosis, or autoimmune diseases. The compositions are consenting cancer, asthma, thrombosis, or autoimmune diseases. The area of a longer composition of the complement fixation, and possibly placental transfer. AAA69443 cc banding, complement fixation, and possibly placental transfer. AAA69443 cc sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Gaps

The present invention describes composition of matter (I) comprising an Fred domain, pharmacologically active peptides, and linkers. Where (I) is:

(XI)a-FI-(X2)b, where: FI = an FC domain; XI and X2 = are each independently selected from -(LI)c-PI-(L2)d-P2.

(LI)c-PI-(L2)d-P2-(L3)d-P2.

(LI)c-PI-(L2)d-P2-(L3)d-P2.

(LI)c-PI-(L2)d-P2-(L3)d-P2.

(Mere PI, P2, P3, and P4 = are each independently sequences of harmacologically active peptides, LI, L2, L3, and L4 = are each independently linkers; and at b. c, d, e, and f = are each independently controlly active peptides, LI, L2, L3, and L4 = are each independently linkers; and at b. c, d, e, and f = are each independently controlly active peptides, LI, L2, L3, and L4 = are each independently linkers; and at b. c, d, e, and f = are each independently controlly controlly active and b. c, d, e, and f = are each independently controlly controlly controlly controlly controlly controlly controlly controlly composition can be used for producing pharmaceutical compositions. The compositions are used for producing pharmaceutical compositions. The compositions are used for producing pharmaceutical compositions. The compositions are before or a FC domain (tather than a Fab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein Abiding, complement fixation, and possibly placental transfer. Aba69443 cto Aba69526 and Aba16955 to Aba18003 represent uncleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker; cyclic; linear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
pharmacologically active peptides, useful for treating cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

The present invention describes composition of matter (I) comprising an Fr domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from - (L1)c-F1-(L2)d-F2-(L3)e-F3-(L4)f-F4-(L3)d-F2-(L3)e-F3-(L4)f-F4-(L2)d-F2-(L3)e-F3-(L4)f-F4-(L2)d-F2-(L3)e-F3-(L3)e-F3-(L4)f-F4-(L2)d-F2-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F3-(L3)e-F

The present invention describes composition of matter (I) comprising an (X1)<sup>2</sup> Fe domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)<sup>2</sup> FF1-(X2)<sup>2</sup>, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)<sup>2</sup> C-P1-(L2)<sup>4</sup> C-P2.

A compound which binds to an mpl receptor comprising a thrombopoietin is new. TWP 1 and TWP 2 are amino acid sequences varying from at least control to 14 residues in length comprising x 2-x 10, x 2-x 11, x 2-x 12, x 1-x 1-3, x 1-x 1-4, x 1-x 1-0, x 1-x 1-1, x 1-x 1-2, x 1-x 1-2, x 1-x 1-2, x 1-x 1-2, x 1-x 1-3, and 2 x 1-x 1-4, x 1-x 1-1, x 1-2, x 1-x 1-2, x 1-x 1-3, and 2 x 1-x 1-4, x 1-4, x 1-1, x 1-1, x 1-2, x 1-x 1-2, x 1-x 1-3, and 2 x 1-x 1-4, x 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The present invention describes composition of matter (I) comprising an Fe domain, harmwacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each (X1)a-F1-(X2)b, where (II) c-P1, (II)2-P1-(II2)d-P2, (II)3-P2 (II)3-P3, and P4 = are each independently sequences of where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are ach independently inkers; and a, b, c, d, e, and f = are ach independently linkers; and a, b, c, d, e, and f = are ach independently linkers; and a, b, c, d, e, and f = are ach independently linkers; and a, b, c, d, e, and f = are ach independently linkers; and a, b, c, d, e, and f = are ach independently linkers; and and b is 1. The composition can activities. DNAs, vectors and host cells from the present invention are activities. DNAs, vectors and host cells from the present inventions are consequenced and an expected and antional cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer of the use of an frodromain (rather than a Fab domain) can provide a longer consequence used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0; Gaps

The present invention describes composition of matter (I) comprising an (X1)a-F1-(X2)b, where: F1 = an Fc domain, X1 and 1inkers. Where (I) is: independently selected from -(L1)c-P1-(L2)d-P2, (L3)e-P3, or -(L1)c-P1-(L2)d-P2, (L3)e-P3, or -(L1)c-P1-(L2)d-P2, (L3)e-P3-(L4)f-P4 pharmacologically active peptides; L1, L2, L3, and L4 = are each independently sequences of independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                  be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fe domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fe receptor binding, protein to AAA69526 and AAB16955 to AAB18003 represent nucleotide and anino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
             Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: independently selected from -(L1)c-P1.-(L3)c-P2. (L3)c-P2. (L3)c-P2. (L3)c-P2. (L3)c-P2. (L3)c-P3. or -(L1)c-P1.-(L3)c-P2. (L3)c-P3. or -(L1)c-P1.-(L3)c-P3. or -(L3)c-P3. or -(L3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein to Androise, complement fixation, and possibly placental transfer. AA69443 sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunoglobulin; IgG1; Fc; thrombopoietin; mimetic; TMP; TPO; platelet;
megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV;
anti-anaemic; dermatological; immunosuppressive; anti-inflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0,

The present invention describes composition of matter (1) comprising an CC domain, plantmacologically active peptides, and linkers. Where (1) is: Fc domain, plantmacologically active peptides, and linkers. Where (1) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each (X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2-(X1)a-F2

The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (XI)=-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(Li)C-F1-(Li)C-F1-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-(Li)d-F2-
pharmacologically active peptides; L1, L2, L3, and L4 = are each independently independently linkers; and a, b, c, d, e, and f = are each independently independently linkers; and a, b, c, d, e, and f = are each independently no or 1, provided that at least 1 of and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can activities. DNAs, vectors and host cells from the present invention are be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer That life or incorporate functions such as Fc receptor binding, protein Abiding, complement fixation, and possibly placental transfer. AAA69443 A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified peptide: therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; minetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoletin; thrombopoletin; interleukin 1; vyttotxoir 7 cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.

Thrombopoietin; mimetic; TWP: TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker; cyclic; linear.
have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer than 18-11fe or incorporate functions such as Fc receptor binding, protein half-life or incorporate function, and possibly placental transfer. AAA69443 Ab binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_l-(L_{-1})_nTMP_2], is new. TMP_l and TMP_2 are amino acid sequences varying from at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "optionally modified by bromoacetyl or PEG"

pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can activities. DNAs, vectors and host cells from the present invention can useful for treating cancer, astima, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer. A binding, complement fixation, and possibly placental transfer. AAA69443 sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes composition of matter (1) comprising an Ec domain, pharmacologically active peptides, and linkers. Where (1) is: (X1)a-T1-(X2)b. where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L1)c-P1-(L2)d-P2-(L3)e-P2-(L3)e-P3-(L1)c-P1-(L2)d-P2-(L3)e-P3-(L3)e-P3-(L1)c-P1-(L2)d-P2-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-

Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker; cyclic; linear.
have cytostatic, antiasthmatic, thrombolytic and immunosuppressive have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein half-life or incorporate function, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least
                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                  .;

pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently loor 1, provided that at least 1 of a and b 1s 1. The composition can activities. DNAs, vectors and host cells from the present invention can useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer. A binding, complement fixation, and possibly placental transfer. AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                          autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; Immunosuppressive; EPO; TPO; CTLA4; mimetic; LI-1; TNF; antagonist; cytotoxic rell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;

The present invention describes composition of matter (I) comprising an RC domain, pharmacologically active peptides, and linkers. Where (I) is: (XI)a-TE-(XZ)b, where: FI = an FC domain; XI and XZ = are each independently selected from -(Li)c-PI-(Li)c-PI-(LZ)d-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-(L3)a-P2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Feige U, Liu C, Cheetham J, Boone TC;

O or 1, provided that at least 1 of a and b is 1. The composition can activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an For domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as For receptor binding, protein A binding, complement fixation, and possibly placental transfer. AA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes composition of matter (I) comprising an (XI)a-FI-(X2)b. where: FI = an Fc domain; XI and X2 = are each independently selected from -(LI)c-FI-(LI)d-F2.

The present invention describes composition of matter (I) comprising an (XI)a-FI-(X2)b, where: FI = an FC domain; XI and X2 = are each (XI)a-FI-(X2)b, where: FI = an FC domain; XI and X2 = are each independently selected from -(LI)c-PI, -(LI)c-PI-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(LZ)d-PZ-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-FP-(L3)-
                          be used for producing pharmaceutical compositions. The compositions are be used for producing pharmaceutical thrombosis, or autoimmune diseases. Useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein half-life or incorporate function, and possibly placental transfer. AAA69443 Ab inding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
activities. DNAs, vectors and host cells from the present invention can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLAA, mimetic; IL-1; TNF; antagonist; ammy: inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;

The present invention describes composition of matter (I) comprising an CC Fc domain, planamacologically active peptides, and linkers. Where (I) is: CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from - (L1)c-P1, -(L1)c-P1-(L2)d-P2, (L3)d-P2, (
useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TTO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endthelial growth factor; matrix metalloproteinase;

The present invention describes composition of matter (I) comprising an (X1)<sup>2</sup> and 1.2.2 F. domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)<sup>2</sup> are (X2)<sup>2</sup> where: Fl = an FC domain; X1 and X2 = are each independently selected from (L1)<sup>2</sup>-Fl. (L2)<sup>4</sup>-Fl. (L2)<sup>4</sup>-Fl. (L2)<sup>4</sup>-Fl. (L2)<sup>4</sup>-Fl. (L3)<sup>4</sup>-Fl. 
activate the c-Mpl receptor which mediates the activity of endogenous thrombopoietin. The TMPs are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g. applastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus.

The present invention describes composition of matter (I) comprising an CF c domain, pharmacologically active peptides, and linkers. Where (I) is: CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)F-P4 (L2)d-P2-(L3)e-P3-(L4)F-P4 (L2)d-P2-(L3)e-P3-(L4)F-P4 (L3)e-P3-(L3)e-P3-(L4)F-P4 (L3)e-P3-(L3)e-P3-(L4)e-P4-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L4)F-P4 (L3)e-P3-(L3)e-P3-(L4)F-P4 (L3)e-P3-(L3)e-P3-(L4)F-P4 (L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)
half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                           6; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modified peptide: therapeutic agent; fusion: Fc domain; cancer;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 16, A
